

Prakash Mukesh Sewani

prakashsewani1994@gmail.com | [8850260072](tel:8850260072) | [Linkedin](#) | Kalyan, Maharashtra

EDUCATION

University of Mumbai

Mumbai, India

Bachelors in Computer Science,

August 2018 - May 2022

Relevant Courses: Cloud Computing, SDLC & Agile Practices, Data Structures and Algorithms, Database Systems, Operating Systems, Programming Fundamentals (C, Java, Python, R).

TECHNICAL SKILLS

Programming Languages: JavaScript, Node, Python, SQL, NoSQL, GraphQL, .NET Core, .NET Framework.

Tools and Software: React, Angular, Single-Spa (micro-frontend), Heroku Cloud tools, GitHub Actions, Redis

WORK EXPERIENCE

Wonderbiz Technologies Pvt Ltd

Senior Software Engineer

July 2022 - Present

SET (Software Experience Transformation)

- Architected a **centralized webshell** to dynamically mount and unmount microfrontends, enabling flexible composition and independent lifecycle management across layout zones.
- Implemented a reusable, **headless Property Panel** micro-frontend using a configurable **init model** to dynamically render device properties across **multiple** device types without UI changes.
- Enabled backend-agnostic data integration and **real-time** property updates by defining configurable live-update capabilities, supporting **scalable and responsive** device interactions using **graphql subscriptions**.
- Defined a **device-agnostic configuration model** using GraphQL, allowing dynamic UI generation and mutations without frontend changes for new device types.
- Established an **event-driven communication model** to enable decoupled data exchange and behavior-based interactions across microfrontends.
- Took ownership of the **maintenance and evolution of 8+ production microfrontends**, ensuring platform stability and consistency within a large-scale installer ecosystem.
- Advanced engineering quality by **driving automated testing adoption**, achieving ~85% code coverage across critical micro frontends and improving release confidence.

Edge I/O Platform

- Engineered a **reusable and layout-aware UI component** for device health visualization, abstracting interaction logic to support multiple screen formats without feature duplication.
- Delivered a **near real-time time-series observability capability** with overlapping and side-by-side multi-device visualization, accelerating pattern detection and troubleshooting workflows.

Dev Cruise

- Optimized map marker rendering by **restructuring state management and selectively leveraging direct DOM interactions**, reducing unnecessary re-renders and improving UI responsiveness.

DCS Analytics

- Led application-layer **SSO architecture** and integration aligned with enterprise **IAM standards**, replacing fragmented authentication flows.

Achievements

- Received **client appreciation** for proactively enabling inter-squad coordination, surfacing cross-team dependencies, and contributing to a timely, high-quality product release.

PROJECTS

SmartEducationBot | Tech Stack: Python, Flask, YAKE!, BERT, BeautifulSoup, Transformers

- Built a **PDF-based** question-answering system using **keyword extraction** and **NLP** models to generate contextual responses.
- Added a **web-scraping** fallback mechanism to improve answer accuracy when **confidence levels were low**.

Meetings AutomationBot | Tech Stack: Python, Selenium, Discord.py

- Built a schedule-driven **meeting automation system** to automatically join and leave sessions, reducing **manual effort** through background execution and **Windows Task Scheduler** integration.
